

PRO-WATCH® AIRPORT IDENTITY MANAGEMENT SOLUTION

Airport Security Solutions

Honeywell

HONEYWELL PRO-WATCH AIRPORT IDMS

Pro-Watch Identity Management Assurance enables airport security managers to resolve the many challenges involved in verifying the identity and backgrounds of the large number of personnel and contractors passing through an airport facility.

Pro-Watch® Identity Management Assurance manages each applicant's status real time, from authentication and authorization, all the way to provisioning badges for access in the physical access control/security system. Because Pro-Watch is an open platform, it works with virtually any access control or third party system including Honeywell solutions to provide a fully integrated Identity Management and Security System.

AIRPORT PERSONNEL CONTROL

Airports have one of the most difficult challenges in managing people's credentials, verifying and checking their identities and backgrounds. Some airports have hundreds of different contract workers across a multitude of organizations, all of whom need verified and managed access according to the different transportation authorities such as the Transportation Security Administration (TSA) or Canadian Air Transport Security Authority (CATSA).

Pro-Watch's software can connect different systems and automate manual processes, reducing human error, eliminating duplicate entries and increasing efficiency and productivity. to maximize your investment.

PRODUCTIVITY

Airports often operate their different systems in silos. Pro-Watch Identity Management Assurance solves that problem with a supervisory management software that connects them all together and automates the manual processes. This increases the productivity of personnel so that they may keep badging lines down to a minimum. The automated data transfers help to greatly reduce human error and eliminate the need for duplicate entries.

COMPLIANCE

Airport security compliance is ever evolving. At Honeywell, we stay on top of the different regulations and update our software accordingly to help keep our customers in compliance. Issuing and verifying badges and credentials is a key security component at any airport, and the need to comply with Homeland Security Directives and the TSA adds to the challenge. Honeywell offers a leading aviation Identity

Management Assurance solution that helps you enforce compliance with Certification Management and Compliance Reports that make audits a breeze. Keeping up with the ever-changing security legislation and resulting mandates is a full time job in itself—one that Honeywell is committed to helping you with. Staying on top of mandates that affect your airport is part of our total security solution commitment to give you peace of mind.

SECURITY

If every airport were built to the exact same specification, then the same security solution could be used in all of them. But each airport is unique in its design and the way it processes applications for credentials. The Pro-Watch Airport is a complete security management system designed, specifically for the unique needs of airports. We have collected valuable data from our airport customers about their requirements to provide

a complete security system that acts both as a deterrent and a means for a quick response. Pro-Watch Airport tracks applications and approvals throughout the Badge provisioning process to improve the time it takes to verify identities and create badges.

COST SAVINGS

Pro-Watch Airport is a proven system used by many national and international airports. Many third party integrations have already been built into Pro-Watch which increases the speed with which the system can be installed and working. Because the Honeywell Pro-Watch Identity Management Assurance solution is 80% off the shelf and 20% custom, you'll enjoy lower installation costs and more importantly, lower on-going operating costs for support.

COUNT ON HONEYWELL

Honeywell is a security leader in a wide range of facilities and operations, including:

- Airport/Seaport
- Education
- Finance/Banking
- Gaming
- Government
- Life Sciences
- Data Centers
- Retail
- Utilities
